PROFESSIONAL SUMMARY

Enterprise software engineer with 3+ years delivering workflow automation and compliance systems for Citibank at Wipro. Transitioning into AI engineering with hands-on experience in RAG pipelines, multi-agent systems, and LLM application development. Holds IBM RAG Specialization and AWS Generative AI Developer certifications. Uniquely positioned to build AI-powered enterprise automation by combining deep knowledge of business process systems with modern LLM tooling.

TECHNICAL SKILLS

AI & LLM: LangChain, LangGraph, RAG, Prompt Engineering, Amazon Bedrock, IBM Watsonx, Agentic Workflows, Multi-Agent Systems, Tool Use, ReAct Framework

Vector Databases: ChromaDB, FAISS, Semantic Search, Vector Embeddings, Cosine Similarity

Cloud: AWS (Bedrock, S3, Lambda), Microsoft Azure

Enterprise Automation: Appian (Certified), KNIME, Low-Code BPM, Process Modeling, SAIL

Programming: Python, SQL (Oracle), Bash/Shell Scripting

Frameworks & Tools: FastAPI, Gradio, Flask, Git, Linux, REST APIs, Docker

WORK EXPERIENCE

Automation Engineer | Wipro Technologies

Aug 2022 – Present

Client: Citibank | EUC Remediation, Governance & Compliance | Delhi-NCR, India

- Developed and enhanced Appian applications for Citibank's EUC Remediation Framework, transitioning manual compliance processes into automated, auditable workflows.
- Pioneered a KNIME–Appian integration** that reduced cycle time by 66% — became the most-requested solution pattern by the client.
- Designed process models, SAIL interfaces, records, CDTs, and validation rules supporting the full remediation lifecycle: tracking, approvals, and regulatory auditability.
- Automated deployment sub-tasks via Bash scripting, improving release consistency and reducing manual handoff effort.
- Implemented risk mitigation controls aligned to banking governance standards and regulatory compliance requirements.

PROJECTS

Revenue Leakage Finder — AWS-Wipro Codeathon github.com/abaghel06/revenueLeakageFinder

- Designed HLD and led AI-assisted development using Amazon Kiro for an agentic billing anomaly detection system built during the AWS-Wipro Codeathon.
- Multi-agent system on Amazon Bedrock (Claude) with LangGraph for ReAct-style reasoning; reconciles billing, CRM, and payment data to surface unbilled usage and pricing errors.
- Stack: Python, LangGraph, Amazon Bedrock, FastAPI, Streamlit, PostgreSQL, Docker

Food Recommendation System — Personal Project github.com/abaghel06/Food-Recommendation-System

- Semantic food search engine using vector embeddings and ChromaDB; RAG-based Q&A chatbot via LangChain over a nutritional knowledge base with grounded, source-cited answers.

- Stack: Python, LangChain, ChromaDB, FAISS, Gradio

CERTIFICATIONS

- **RAG for Generative AI Applications Specialization** — IBM *(May 2026)*
- **Generative AI Learning Plan – Developers (Partner)** — Amazon Web Services *(Mar 2026)*
- **Appian Certified Developer** — Appian *(2023)*
- **Advanced Proficiency in KNIME Analytics Platform** — KNIME *(Dec 2022)*
- **Microsoft Certified: Azure Data Fundamentals** — Microsoft *(Sep 2022)*
- **Microsoft Certified: Azure Fundamentals** — Microsoft

EDUCATION

B.Tech – Computer Science Engineering | Dr. APJ Abdul Kalam Technical University *2019 – 2022*
Lucknow, India

Diploma in Engineering | Dayalbagh Educational Institute *2016 – 2019*
Agra, India
